

The **tableof** package

JEAN-FRAN OIS BURNOL
jfbu (at) free (dot) fr
Package version: v1.4a (2015/03/10)
Documentation generated from the source file
with timestamp "10-03-2015 at 22:22:48 CET"

Abstract

The commands `\toftagstart`, `\toftagstop`, `\toftagthis`, `\torefntagthis` are used to tag chapters, sections or any other sectioning units destined to end up in the table(s) of contents. Then:

```
\nexttocwithtags{req. 1, req. 2, ...}{excl. 1, excl. 2, ...}  
\tableofcontents % or equivalent command
```

specifies which tags are to be required and which ones are to be excluded from the typeset TOC.

For documents with classes where `\tableofcontents` is only single-use, the package provides:

```
\tableoftaggedcontents{req. 1, req. 2, ...}{excl. 1, excl. 2, ...}
```

which does not have this restriction.

Contents

1 Tagging commands	1
1.1 <code>\toftagstart {tag1, tag2, ...}</code> and <code>\toftagstop {tag1, tag2, ...}</code>	1
1.2 <code>\toftagthis {tag1, tag2, ...}</code> and <code>\torefntagthis {tag1, tag2, ...}</code>	1
1.3 Spaces	2
2 Table of contents commands	2
2.1 <code>\nexttocwithtags {required tag1, required tag2, ...}{excluded tag1, excluded tag2, ...}</code>	2
2.1.1 starred variants	2
2.2 <code>\tableoftaggedcontents {required tag1, required tag2, ...}{excluded tag1, excluded tag2, ... }</code>	3
2.2.1 starred variants	3
2.3 <code>\tableof {required tag1, required tag2, ...}</code>	3
2.4 <code>\tablenotof {excluded tag1, excluded tag2, ...}</code>	3
2.5 <code>\topenTocFileForWrite</code>	3
3 Compatibility with other packages	4
4 Version History	4
5 Generating the package file and the test file	5
6 Implementation	5

1 Tagging commands

1.1 \toftagstart {tag1, tag2, ...} and \toftagstop {tag1, tag2, ...}

These commands have a mandatory argument which is a comma separated list of tags. The tags need not have been predeclared.

```
\toftagstart{kitchenware, weaponry, gastronomy}
\section{Dealing with knives}      % tagged with kitchenware+weaponry+gastronomy

\toftagstop{kitchenware}
\section{Hunting rabbits}        % tagged with weaponry+gastronomy

\toftagstart{tag1}
\subsection{This is tagged, too} % tagged with weaponry+gastronomy+tag1

\toftagstop{weaponry}
\section{Eating rabbits}        % tagged with gastronomy+tag1
```

1.2 \toftagthis {tag1, tag2, ...} and \torefntagthis {tag1, tag2, ...}

The \toftagthis command flags with the comma separated values from its list argument only the *next* sectioning command. The effect is not cumulative: it is the last use of \toftagthis which counts; use it for all the needed tags at once.

The \torefntagthis command similarly untags only the *next* entry. Similarly, only the tags in the last call of \torefntagthis are taken into account.

```
\toftagstart{kitchenware, rabbits}
\section{Knives and rabbits}      % tagged with kitchenware and rabbits

\torefntagthis{kitchenware}
\subsection{Hunting rabbits}      % tagged only with rabbits

\subsection{Best knives for cooking} % tagged with kitchenware and rabbits

\toftagstart{ecology}
\toftagthis{climate}
\section{Knives and global climate} % tagged with kitchenware+rabbits+ecology+climate

\toftagstop{kitchenware}
\section{The rabbit in the wild}    % tagged with rabbits+ecology
```

1.3 Spaces

Spaces in tags and around commas in tag lists are transparently removed. (*new with release 1.3*). Tags may be macros, they are completely expanded before use.

2 Table of contents commands

2.1 \nexttocwithtags {required tag1, required tag2, ...}{excluded tag1, excluded tag2, ...}

This command influences the next \tableofcontents (or equivalent) command:

```
\nexttocwithtags{A, B}{C, D, E}
\tableofcontents
```

will let \tableofcontents print only the sectioning units having been flagged with both A and B and none of C, D, or E.

DO NOT FORGET THE SECOND PAIR OF BRACES EVEN IF YOU ONLY WANT TO REQUIRE SOME TAGS: \nexttocwithtags{tag1, tag2}{}.

2.1.1 starred variants

There are starred variants:

```
\nexttocwithtags{A, B}{C, D, E}    % A and B and neither C nor D nor E
\nexttocwithtags*{A, B}{C, D, E}  % (A or B) and neither C nor D nor E
\nexttocwithtags{A, B}*{C, D, E}  % A and B and (not C or not D or not E)
\nexttocwithtags*{A, B}*{C, D, E} % (A or B) and (not C or not D or not E)
```

2.2 \tableoftaggedcontents {required tag1, required tag2, ...}{excluded tag1, excluded tag2, ... }

This command is provided in case the document class allows only a single use of \tableofcontents, indeed \tableoftaggedcontents can be used arbitrarily many times. **However it does not typeset a heading.** Example:

```
\section*{A table of tagged contents} % <- needs to be explicitly added
\tableoftaggedcontents{weaponry, hunting}{ecology, climate}
```

This will limit the printed TOC entries to the ones which have been tagged with **weaponry** and also with **hunting**, but not with **ecology** and neither with **climate**.

2.2.1 starred variants

There are starred variants:

```
\tableoftaggedcontents{A, B}{C, D, E}    % A and B and neither C nor D nor E
\tableoftaggedcontents*{A, B}{C, D, E}  % (A or B) and neither C nor D nor E
\tableoftaggedcontents{A, B}*{C, D, E}  % A and B and (not C or not D or not E)
\tableoftaggedcontents*{A, B}*{C, D, E} % (A or B) and (not C or not D or not E)
```

2.3 \tableof {required tag1, required tag2, ...}

This is equivalent to `\tableoftaggedcontents{required tag1, ...}{}{}`.

```
\tableof{weaponry,hunting} % will print the entries tagged with weaponry  
AND hunting
```

There is a starred variant:

```
\tableof*{weaponry, hunting} % will print the entries tagged with weaponry  
OR hunting
```

2.4 \tablenotof {excluded tag1, excluded tag2, ...}

This is equivalent to `\tableoftaggedcontents{}{}{excluded tag1, ...}{}`.

```
\tablenotof{weaponry, hunting}  
% will print the entries NOT tagged with weaponry NEITHER with hunting
```

There is a starred variant:

```
\tablenotof*{weaponry, hunting}  
% will print the entries NOT tagged with weaponry OR NOT tagged with hunting
```

2.5 \tofOpenTocFileForWrite

The contents of the .toc file (if it already exists) are read into memory by **tableof** once, at the time of `\begin{document}`.¹ Notice that this reading of the .toc file into memory is only of relevance if the document makes use of one of the `\tableoftaggedcontents`, `\tableof` or `\tablenotof` commands.

The creation of the .toc file is *not* dealt with by **tableof** itself: either this will be done by a standard `\tableofcontents` command somewhere in the document, or, one may use the package provided command `\tofOpenTocFileForWrite` which does not display anything and just does what its name indicates. This command should **not** be used in the preamble, however

```
\usepackage{tableof}  
\AtBeginDocument{\tofOpenTocFileForWrite}
```

is possible.

Please consider: this command should *not* be used when the document makes use of its own `\tableofcontents` or equivalent. It is provided *only* for the case where the document uses *exclusively* `\tableoftaggedcontents`, `\tableof` and `\tablenotof`.

3 Compatibility with other packages

tableof checks if `hyperref` is loaded as `hyperref` modifies the format of the lines in the .toc file (and this must be taken into account). This check is done at the `\begin{document}` so the order of loading is not important.

¹New with 1.3. Earlier versions read the .toc file at the time of `\usepackage{tableof}`. But this could cause a problem if the .toc file used characters not yet activated by Babel.

tableof requires the document `.toc` file to use the `\contentsline` macro (possibly patched by other packages). It is thus incompatible with the `beamer` class. However, if `beamer` is used in an article mode, i.e., with the `article` class in conjunction with the `beamerarticle` package, then **tableof** should work.

tableof adds the tag data to the `.toc` file, but this data self-defines itself to do nothing when not activated by **tableof**'s own commands. Since release 1.3, these redefinitions are done in *one single* line of the `.toc` file to circumvent interference of `biblatex` which adds commands to the `.toc` line on every other line (thus, potentially right in the middle of multi-line commands :-(.)

No testing has actually been done of compatibility with packages manipulating tables of contents, apart from `etoc`.² It went fine.

4 Version History

- 2015/03/10 v1.4a:
 - i. changes in the code to make it more easily patchable by other packages (I have especially the next release of `etoc` in mind): changes to the way `\tof@begin`, `\tof@finish` are set up, new `\tof@global` which defaults to nothing but may be set to be `\global` (this is in view of doing TOCs as tabulars of longtables, in the way `etoc 1.08` will permit).
 - ii. improved sectioning of the documentation.
- 2015/02/20 v1.4:
 - i. some code efficiency improvements (some `\edef`'s replaced by a bunch of `\expandafter`'s.)
 - ii. improved documentation.
- 2015/02/11 v1.3:
 - i. comma separated lists of tags now allow spaces.
 - ii. only one line used for the `.toc` code silently unactivating `tableof` if its `\usepackage{tableof}` has been removed from the document source. (needed due to aggressive `biblatex` interference with `.toc` files.)
 - iii. reading of `.toc` file is delayed to `\begin{document}` to account for possible Babel active characters used therein. Not relevant if document uses standard `\tableofcontents` or like commands.
- 2013/03/04 v1.2:
 - i. added `\tableoftaggedcontents` as a wrapper for using `\nexttocwithtags` followed with `tableof`'s private copy of the `.toc` data.
 - ii. added `\if@filesw` test to `\tofOpenTocFileForWrite`.
- 2012/12/13 v1.1:
 - i. new command `\nexttocwithtags`.
 - ii. `.toc` may be input in another document not loading **tableof**.
- 2012/12/06 v1.0: initial version.

5 Generating the package file and the test file

Running `latex` on `tableof.dtx` generates: 1) the package file `tableof.sty` (which should be moved to a suitable location within the `TeX` installation), 2) `tableof.ins` for

²<http://www.ctan.org/pkg/etoc>

TEX distributions expecting such a file, 3) `tableoftest.tex` which demonstrates the package features (one should run `latex` twice on it), and 4) the documentation itself. After running `latex` twice, use `dvipdfmx` to produce the pdf documentation.

6 Implementation

```
1 \ProvidesPackage{tableof}
2 [2015/03/10 v1.4a Tables of tagged contents (jfb)]
3 \NeedsTeXFormat{LaTeX2e}
4 \DeclareOption*{\PackageWarning{tableof}{Option '\CurrentOption' is unknown.}}
5 \ProcessOptions\relax
6 \newtoks\tot@toctoks
```

1.3 codes this `\tot@readtoc` slightly better (copied from `etoc.dtx`).

```
7 \def\tot@readtoc {%
8   \ifeof \tot@tf
9   \else
10    \read\tot@tf to \tot@buffer
11    \tot@toctoks\expandafter\expandafter\expandafter
12      {\expandafter\the\expandafter\tot@toctoks\tot@buffer}%
13    \expandafter\tot@readtoc
14  \fi }
```

1.3 of 2015/02/11 moves the reading of the toc file to At Begin Document. This is needed for Babel activated characters. I also re-use `\endlinechar-1` which I had commented out since release 1.1. Notice though that this is irrelevant if the document uses `tableof` only via its tagging abilities, and has standard `\tableofcontents` command to print the TOC.

```
15 \AtBeginDocument{\IfFileExists{\jobname.toc}{%
16   {{\endlinechar\m@ne
17     \makeatletter
18     \newread\tot@tf
19     \openin\tot@tf@\filef@und
20     \tot@readtoc
21     \global\tot@toctoks=\expandafter{\the\tot@toctoks}%
22     \closein\tot@tf}}{}}}
```

The trick is that `\@ifundefined` chooses the undefined branch if the meaning is `\relax`. Thus it is possible for `tableof` to define and use `\tot@begin` and later set it to `\relax`, the entire influence of `tableof` will then be turned off.

1.2 of 2013/03/04: `\string{->{}`, idem with `}{`. And added `\if@filesw` test.

1.3 of 2015/02/11: to circumvent aggressive biblatex manipulation of the `.toc` file, I put things to the `.toc` file in one-go; else weird commands might get inserted right in the middle of arguments to a multi-line macro! also removed a bunch of `\string`'s: when I first wrote this package I had still limited understanding of TEX's macros.

1.4a uses `\@empty` for the default `\tot@finish` rather than `\relax`, for no special reason. Also the `\let`'s in case `\tot@begin` is undefined or `\relax` are all made global, because for compatibility with the fancy things `etoc 1.08` will allow for TOC as table we need a global mode, and the simplest is here to do the things global by default.

```
23 \AtBeginDocument{%
24   \addtocontents{toc}{\string\@ifundefined{tot@begin}{%
25     {\global\let\string\tot@begin\relax}}
```

6 Implementation

```

26   \global\let$string\tot@finish$string@\empty
27   \global\let$string\tot@starttags$string@gobble
28   \global\let$string\tot@stoptags$string@gobble
29   \global\let$string\tot@tagthis$string@gobble
30   \global\let$string\tot@untagthis$string@gobble}{}}
31 \addtocontents{toc}{\string\tot@begin}
32 \@ifpackageloaded{hyperref}
33 { \def\tot@gobblethree@orfour#1#2#3#4{}%
34   \ifx\hyper@last\undefined\tot@toctoks{}\fi}
35 { \def\tot@gobblethree@orfour#1#2#3{}}
36 \AtEndDocument{\addtocontents{toc}{\string\tot@finish}}

```

1.4a makes the things more easily patchable by other packages, especially I have **etoc** in mind.

`\tot@starttags` and `\tot@stoptags` are defined a bit later in the code. And we use `\tot@global`. And we need `\tot@finish` to reset `\tot@tags` to empty, just in case `\tot@global` was `\global`. And also `\contentsline` !! But here it is a problem redefining it globally. In normal use of **tableof**, nothing needs to be done, because the `\tot@endgroup` closes the scope. In global mode (triggered only by **etoc** with `\etocglobaldefs` for tabulars), it needed to globally modify `\contentsline`, thus it or **etoc** has to globally unmodify it. **etoc** 1.08 by itself without **tableof** doesn't have to reset `\contentsline` because it re-defined it *before* an eventual tabular. But as it forced **tableof** to do global things, in such case **etoc** will have to proceed globally as well.

```

37 \let\tot@global    \@empty
38 \let\tot@begingroup \begingroup
39 \let\tot@endgroup   \endgroup
40 \def\tot@finish    {\tot@global\let\contentsline\tot@savedcontentsline
41                           \tot@endgroup\global\let\tot@begin\relax
42                           \global\let\tot@tags@\empty }
43 \def\tot@tagthis   #1{\def\tot@tags@tmp{#1}}
44 \def\tot@untagthis #1{\def\tot@untags@tmp{#1}}
45 \def\tot@init#1{%
46   \def\tot@begin{%
47     \tot@begingroup
48     \tot@global\let\tot@tagthis \tot@tagthis
49     \tot@global\let\tot@untagthis\tot@untagthis
50     \tot@global\let\tot@starttags\tot@starttags
51     \tot@global\let\tot@stoptags \tot@stoptags
52     \tot@global\let\tot@finish \tot@finish
53     \tot@global\let\tot@savedcontentsline\contentsline
54     \tot@global\def\contentsline {#1}}}

```

place holder for comments

```

55 \newcommand\totOpenTocFileForWrite{%
56   \if@filesw
57   \newwrite \tf@toc
58   \immediate \openout \tf@toc \jobname.toc\relax
59 }

```

Creating our booleans is not the most economical, (one could have used a single list macro) but heck, how many tags are there going to be anyhow in normal use? a dozen at the very most I think.

6 Implementation

1.4a: fortunately no need for the `\t@f@global` thing! However, careful with `\t@f@tags` it will have to be reset to empty by `\t@f@finish` in case `\t@f@global` is `\global`.

```

60 \let\t@f@tags      \@empty
61 \let\t@f@tags@tmp  \@empty
62 \let\t@f@untags@tmp \@empty
63 \def\t@f@true #1{\expandafter\let\csname tofsw@\#1\endcsname\iftrue}
64 \def\t@f@false#1{\expandafter\let\csname tofsw@\#1\endcsname\iffalse}
65 \def\t@f@secondiftrue#1%
66   {\csname tofsw@\#1\endcsname \let\t@f@next@\secondoftwo\fi}
67 \def\t@f@secondiffalse#1%
68   {\csname tofsw@\#1\endcsname\else\let\t@f@next@\secondoftwo\fi}
```

1.4a: fortunately no need for the `\t@f@global` thing; the `\t@f@setflags` is used at *each* `\contentsline`. Quite useful design, congrats to the original architect !

```

69 \def\t@f@setflags #1{\let\t@f@next@\firstoftwo
70   @for@tempa:=#1\do          {\t@f@true {\@tempa}}%
71   @for@tempa:=\t@f@tags\do    {\t@f@false{\@tempa}}%
72   @for@tempa:=\t@f@tags@tmp\do {\t@f@false{\@tempa}}%
73   @for@tempa:=\t@f@untags@tmp\do{\t@f@true {\@tempa}}}
```

Release 1.4 uses here a bunch of `\expandafter`'s in place of some `\edef`'s.

```

74 \def\t@f@filter#1#2{\ifx#1#2\else
75   \ifx\t@f@tmptags@\empty
76     \expandafter\def\expandafter\t@f@tmptags\expandafter{#2}%
77   \else
78     \expandafter\expandafter\expandafter\def
79     \expandafter\expandafter\expandafter\t@f@tmptags
80     \expandafter\expandafter\expandafter{\expandafter
81     \t@f@tmptags\expandafter ,#2}%
82   \fi\fi}
```

1.4a needs the `\t@f@global` in the hope for **tableof** to be compatible with future **etoc 1.08** when employed in the delicate art of TOC as a table !

```

83 \def\t@f@starttags#1{%
84   \ifx\t@f@tags@\empty
85     \t@f@global\def\t@f@tags{#1}%
86   \else
87     \t@f@global
88     \expandafter\def\expandafter\t@f@tags\expandafter{\t@f@tags ,#1}%
89   \fi }
90 \def\t@f@stoptags#1{%
91   @for@tempa:=#1\do{%
92     \def\t@f@tmptags{}%
93     @for@tempb:=\t@f@tags\do{\t@f@filter@\tempa@\tempb}%
94     \t@f@global
95     \expandafter\def\expandafter\t@f@tags\expandafter{\t@f@tmptags}%
96   }%
97 }
```

Until 1.3, I was just using the `@for` thing with no attempt at any extra parsing, for spaces in particular. With 1.3 of 2015/02/11 I use an `\edef` to remove all spaces first, using a `\zapspaces` macro pioneered in `xintkernel.sty`. Thus, comma separated lists of tags can have spaces. They will be removed if not protected by braces.

```
98 \def\t@f@zapspaces #1 #2{\#1\#2\t@f@zapspaces }%
```

6 Implementation

```
